

EISCAT Scientific Association

The Sodankylä site from above. Photo by Craig Heinselman

EISCAT Scientific Association is a non-profit scientific organisation that operate four radar antenna sites to enable research on the ionosphere and the upper atmosphere. Our radars are all located above the Arctic Circle and all radar sites work together, which give scientist an unique reserarch opportunity. EISCAT radars have been used for different types of studies and different phenomenas, for example [Space Weather](#), [Space Debris](#) and the [Aurora](#). You can find more information in the [publications](#).

To get access to our facilities, read more [here](#).
